**TECHNICAL MANUAL**

**including Installation, Operation, and Maintenance Instructions**

**FOR**

**DOOR TYPE DISHMACHINES**

**MODEL: Commander 18-3 / CS-4**

18-3  
new pump  
# 3018-K39

## **COMMANDER 18-3/CS-4**

### **INSTALLATION INSTRUCTIONS**

#### **Section A**

##### **A.1 PLACEMENT**

- A.1.1 Carefully uncrate machine. Take caution to not damage components which may be mounted on the top or sides of the machine.
- A.1.2 Set unit in place and adjust the feet to level the machine.
- A.1.3 Fasten the tables to the load and unload side of the machine. Most installations require fastening the turn-down lip of the dish tables to the side of the machine with flathead counter-sunk screws. The table design should provide horizontal clearance of 30" for servicing.

##### **A.2 ELECTRICAL CONNECTIONS**

- A.2.1 Connect electrical lines sized for the correct voltage, current and phase of the machine. These should agree with machine requirements indicated on the nameplate and labels in control panel.
- A.2.2 A single-point electrical connection is provided for the pumps, control circuit, and wash tank heater.
- A.2.3 If an electrical booster is provided connect the power directly to the booster. If the Insinger Self-Contained booster is provided the machine comes standard with a Single-Point Connection.

**NOTE:** In each case connections must be made to a circuit breaker or fused disconnect as provided by the end-user and required by local codes. A wiring diagram is supplied inside the control panel. Please return diagram when finished.

**IMPORTANT:** As with any 3 phase system, an electrician should check all motors for proper phasing, i.e., Pump motors must be running in direction indicated by arrow on housing.

##### **A.3 MECHANICAL CONNECTIONS**

- A.3.1 Connect 140DEGF water lines for tank fills/booster as tagged and noted on the installation drawings.
- A.3.2 If machine is provided with steam heat connect the steam lines and steam condensate lines as tagged and noted on installation drawings.  
If machine is provided with gas heat, connect the gas lines for each tank.
- A.3.3 Connect the drain line.

**COMMANDER 18-3/CS-4  
INSTALLATION INSTRUCTIONS  
Section A**

**A.3 MECHANICAL CONNECTIONS, cont'd**

**NOTE:** Drain lines must be as specified on installation drawings. Drain line should be properly vented and should have fall of not less than 1/4" to the foot of proper flow. Some area plumbing codes require drains to flow into an open gap with an opening twice the diameter of the pipe. Check with your local plumbing codes for the type of drain connection required.

**NOTE:** All lines should be flushed prior to use to remove debris.

**IMPORTANT:** Do not reduce the size of lines as specified in installation drawings. All lines are sized to facilitate necessary flows, pressures, etc.

**A.4 HVAC**

- A.4.1 Ventilation system should be sized to provide adequate ventilation per machine specs. Refer to spec sheet.

**A.5 Chemicals**

- A.5.1 Upon completed installation of the dishwasher contact a local detergent/chemical supplier for the correct chemicals for your area.
- A.5.2 Electrical connection points for the detergent dispenser and rinse injector are located inside the control panel. Refer to the wiring diagram for this machine for the proper connection points. Dispensers may be connected on either the primary voltage side of the machine or the 24VAC control voltage side.

**IMPORTANT:** When connecting on the 24VAC control voltage side of the transformer, total KVA must not exceed .5KVA.

- A.5.3 The detergent density probe should be located in a convenient place in the wash tank.

**A.6 Tabling**

- A.6.1 Load and unload tables should be pitched towards the machine to return excess water into the machine.

## **COMMANDER 18-3/CS-4**

### **OPERATION**

#### **Section B**

Insinger dishmachines are user-friendly, making them the easiest dishwashers on the market to operate and maintain.

By following the operation procedure and general cleaning procedures your Insinger dishwasher will give you years of trouble free service.

##### **B.1 Operation Instructions**

- B.1.1 Ensure drain overflow tube is in place Close the tank drain valve.
- B.1.2 Check for proper installation and cleanliness of all internal, removable components such as suction strainers, scrap screens, and spray manifolds.
- B.1.3 Ensure all water, steam, and gas lines are open. Ensure electrical circuits are on.
- B.1.4 Close machine doors.
- B.1.5 Move the power toggle switch to the "ON" position. The machine will fill the tank, run through a complete wash/rinse cycle and shut-off.
- B.1.6 When the tanks are full the tank heat will operate automatically. Proper tank heat temperature is 156DEGF minimum. Proper final rinse temperature is 180DEGF minimum.

**IMPORTANT:** To ensure proper operation of the auto tank fill feature and the tank heaters level float(s) located in each tank **MUST** be cleaned daily.

- B.1.7 Open doors.
- B.1.8 Insert a rack of soiled dishware in machine and lower doors. Machine will wash and rinse automatically. When the rinse indicator light goes off the machine cycle is complete.

**NOTE:** Overloading racks will minimize the proper cleaning of ware.

**IMPORTANT:** Do not open the doors during the wash/rinse cycle as hot water is being sprayed. An interlock is provided to stop the wash/rinse cycle if the doors are open but the momentum of the spinning hubs will cause hot water to be sprayed.

- B.1.9 Raise doors and remove rack of clean ware. For continuous operation repeat steps B.1.9 and B.1.10.

## **COMMANDER 18-3/CS-4**

### **OPERATION**

#### **Section B**

##### **B.1 Operation Instructions, cont'd**

B.1.10 Upon completion of ware cleaning move the power toggle switch to the "OFF" position.

B.1.11 Refer to the cleaning procedures for proper clean-up of the dishmachine.

B.1.12 Report any unusual occurrences to qualified service personnel.

The following cleaning procedures should be done daily, at the end of the shift.

##### **B.2 Cleaning Procedures, Daily**

B.2.1 Remove all internal removable parts including spray manifolds, scrap screens, drain overflow tubes, suction strainers and curtains.

B.2.2 Remove the end caps from the spray manifolds and clean with the brush provided. Flush the manifolds.

B.2.3 Flush scrap screens.

B.2.4 Clean drain overflow tube.

**Note:** V-cup seal on the drain overflow tube may become gummed not allowing a proper seat of the overflow tube. This will cause the drain to leak water. Remove any build-up on the V-cup seal. When the seal becomes worn, replace.

B.2.5 Clean suction strainers of build-up.

**Note:** Improper cleaning of suction strainers will cause the pumps to cavitate. This will cause poor washing results.

B.2.6 Clean tank level float(s).

**Important:** Level floats must be cleaned daily. Build-up of grease and debris will cause faulty operation of tank fill and heating system.

B.2.7 Final rinse nozzles should be cleaned of matter clogging the jet spray.

B.2.8 Doors should be left open to allow drying of interior surfaces.

## **COMMANDER 18-3/CS-4**

### **MAINTENANCE and REPAIR PROCEDURES**

#### **Section A**

Following is a basic guide for the repair and replacement of common dishwasher parts.

Refer to the Basic Service Guide for troubleshooting tips.

#### **A.1 MAINTENANCE**

**A.1.1 Daily** - Refer to the operation and cleaning instructions provided in this manual for daily cleaning procedures.

**A.1.2 Weekly**

**A.1.2.1** The entire machine should be wiped down using an industrial grade stainless steel cleaner.

**A.1.2.2** Under the supervision of your detergent supplier the machine interior must be properly de-limed.

**NOTE:** The water quality in some areas requires de-liming to be done more frequently. Contact your detergent supplier for recommended de-liming frequency.

**A.1.3 Quarterly**

**A.1.3.1** Remove and clean the strainer screens on water and steam lines. If the screens cannot be cleaned, replace.

**A.1.3.2** Inspect condition of solenoid valve seats and diaphragms. Replace where necessary.

**A.1.3.3** Inspect drain O-Rings for leakage. Replace where necessary.

**A.1.3.4** Check door spring tension and adjust where necessary.

**A.1.3.5** Check wash and rinse hub bushing/bearing and replace where necessary.

#### **A.2 MAINTENANCE PROCEDURES**

**A.2.1 Solenoid Valve Disassembly**

**A.2.1.1** Disconnect power supply to machine. Turn off Water supply.

**A.2.1.2** Remove cap on top of coil. Remove coil.

**A.2.1.3** Remove 4 hex bolts and lift bonnet from valve body. Note positioning of spring and plunger.

**A.2.1.4** Remove main piston.

**A.2.1.5** Inspect for dirt, wear or lime build-up. Clean or replace as required.

**A.2.1.6** Reassemble in reverse of disassembly.

**COMMANDER 18-3/CS-4**  
**MAINTENANCE and REPAIR PROCEDURES**  
**Section A**

- A.2.2 Line Strainer Disassembly
  - A.2.2.1 Shut off water or steam supply.
  - A.2.2.2 Remove large hex nut on bottom of strainer body.
  - A.2.2.3 Remove strainer screen. Inspect and clean or replace as necessary.
  - A.2.2.4 Reassemble in reverse of disassembly. Water flow must be same direction as arrow on line strainer body. Use new gaskets to insure a tight seal.
- A.2.3 Pump Disassembly
  - A.2.3.1 Before disassembling pump ensure there are no obstructions in the pump intake. Remove and clean the suction strainer (inside tank).
  - A.2.3.2 IT IS NOT NECESSARY TO REMOVE THE PUMP HOUSING FROM THE MACHINE TO DISASSEMBLE THE PUMP.
  - A.2.3.3 Remove the pump motor and impeller adaptor by removing the 4 hex bolts attaching them to the pump housing.
  - A.2.3.4 Repair or replace the pump parts as required.
  - A.2.3.5 Reassemble in reverse of disassembly.
- A.2.4 Immersion Heater Replacement
  - A.2.4.1 The immersion heater MUST be completely submerged at all times. If this is not the case contact a qualified service technician. The heated surface should never be in contact with sludge.
  - A.2.4.2 Remove the housing covering the wiring terminations. Disconnect the immersion heater wires.
  - A.2.4.3 Remove the immersion heater by loosening and removing the large hex nut.
  - A.2.4.4 Install in reverse of removal.  
NOTE: USE PLUMBERS PUTTY AS GASKETING AROUND THE IMMERSION HEATER TO INSURE NO LEAKS.
- A.2.5 Wash Tank Temperature Adjustment
  - A.2.5.1 A temperature control board is provided in the control panel for easy adjustment of tank temperature. Though tank temperature is adjusted during the machines factory test it is sometimes necessary to re-adjust the temperature at start-up.
  - A.2.5.2 Locate the temperature control board (P/N DE9-96). Use the control panel layout drawing located in Section 3, Electrical Schematic and Replacement Parts.

**COMMANDER 18-3/CS-4**  
**MAINTENANCE and REPAIR PROCEDURES**  
**Section A**

- A.2.5.3 Adjust the tank temperature to the desired temperature by turning the potentiometer located on the temperature control board. An arrow on the potentiometer indicates increase.
- A.2.5.4 If the temperature does not change refer to section A.2.6, Troubleshooting Tank Temperatures.
- A.2.6 Troubleshooting Tank Temperatures**
  - A.2.6.1 Electric Heat**
    - A.2.6.1.1 If temperature cannot be adjusted per section A.2.5 check the temperature control board P/N DE9-96 proper operation. If the temperature control board is faulty, replace.
    - A.2.6.1.2 Verify tank heat contactor is working correctly. If not, replace.
    - A.2.6.1.3 Verify all immersion heaters are working properly and not limed. If not, replace.
  - A.2.6.2 Steam Heat**
    - A.2.6.2.1 See Section A.2.6.1.1.
    - A.2.6.2.2 Verify steam pressure per machine specifications.
    - A.2.6.2.3 Verify steam trap is not clogged. IF so, replace.
  - A.2.6.3 Gas Heat**
    - A.2.6.3.1 See Section A.2.6.1.1.
    - A.2.6.3.2 Verify gas supply.
    - A.2.6.3.3 Verify pilot is lit. If not, light. If pilot does not stay lit, replace.
    - A.2.6.3.4 Verify gas solenoid is working correctly. If not, replace.
- A.2.7 Motor Overloads**
  - A.2.7.1 All motors used on Insinger Machines are provided with motor overloads. Motor overloads are adjusted when the machines are factory tested. Should it be necessary to adjust the motor overloads in the field first verify the motor current draw for the voltage the machine is using.
  - A.2.7.2 Using the Control Panel Component Layout Dwg. located in Section 3 to identify the overload adjust by turning the dial to the appropriate AMP draw.

**COMMANDER 18-3/CS-4  
MAINTENANCE and REPAIR PROCEDURES  
Section A**

**A.2.8 Level System**

- A.2.8.1** The level control system consists of one level timer board (P/N DE7-32) and one level float (P/N DE5-60) per tank or two level floats for an electrically heated machine.
- A.2.8.2** The level timer and float will not allow the tank heat to energize without water in the tank.
- A.2.8.3** Should the tank heat energize with out water in the tank troubleshoot the system to find the problem.

**IMPORTANT: LEVEL FLOATS MUST BE CLEANED DAILY TO ENSURE THE PROPER OPERATION OF THE LEVEL CONTROL SYSTEM.**

**A.2.9 Wash and Rinse Cycle**

- A.2.9.1** The timing sequence consists of two timers. The Commander 18-3 and CS-4 use two, one minute timers (P/N DE7-27). The CA-3 and DA-3 use one, one minute timer (P/N DE7-27) and one, five minute timer (P/N DE7-28). Should either of these become defective, replace.

## BASIC SERVICE GUIDE

SYMPTOM	POSSIBLE CAUSE	Solution
1. Machine will not operate	a. No Power b. Blown fuse or tripped breaker c. Motor overloads tripped	a. Check power supply b. Replace fuse; reset breaker c. Reset overload
2. Tank will not hold water	a. Drain not closed b. Drain overflow not seated or installed c. Pump petcock opened	a. Close drain b. Reseat or install drain overflow c. Replace V-seal
3. Tank fills beyond overflow	a. Obstruction in overflow tube or drain line	a. Remove obstruction
4. Water leaks around door	a. Doors not seating b. Clogged spray pipe	a. Reseat doors b. Clean spray pipe with brush provided
5. Weak or ineffective spray	a. Clogged spray pipe b. Manifolds not installed properly c. Obstruction in pump d. Pump rotation reversed e. Suction strainer clogged	a. Clean spray pipe with brush pipe b. Ensure proper placement of upper and lower pipes c. Clear obstruction through pump inspection plate d. Arrow on pump housing indicates direction, correct electrically e. Clean suction strainer

## BASIC SERVICE GUIDE

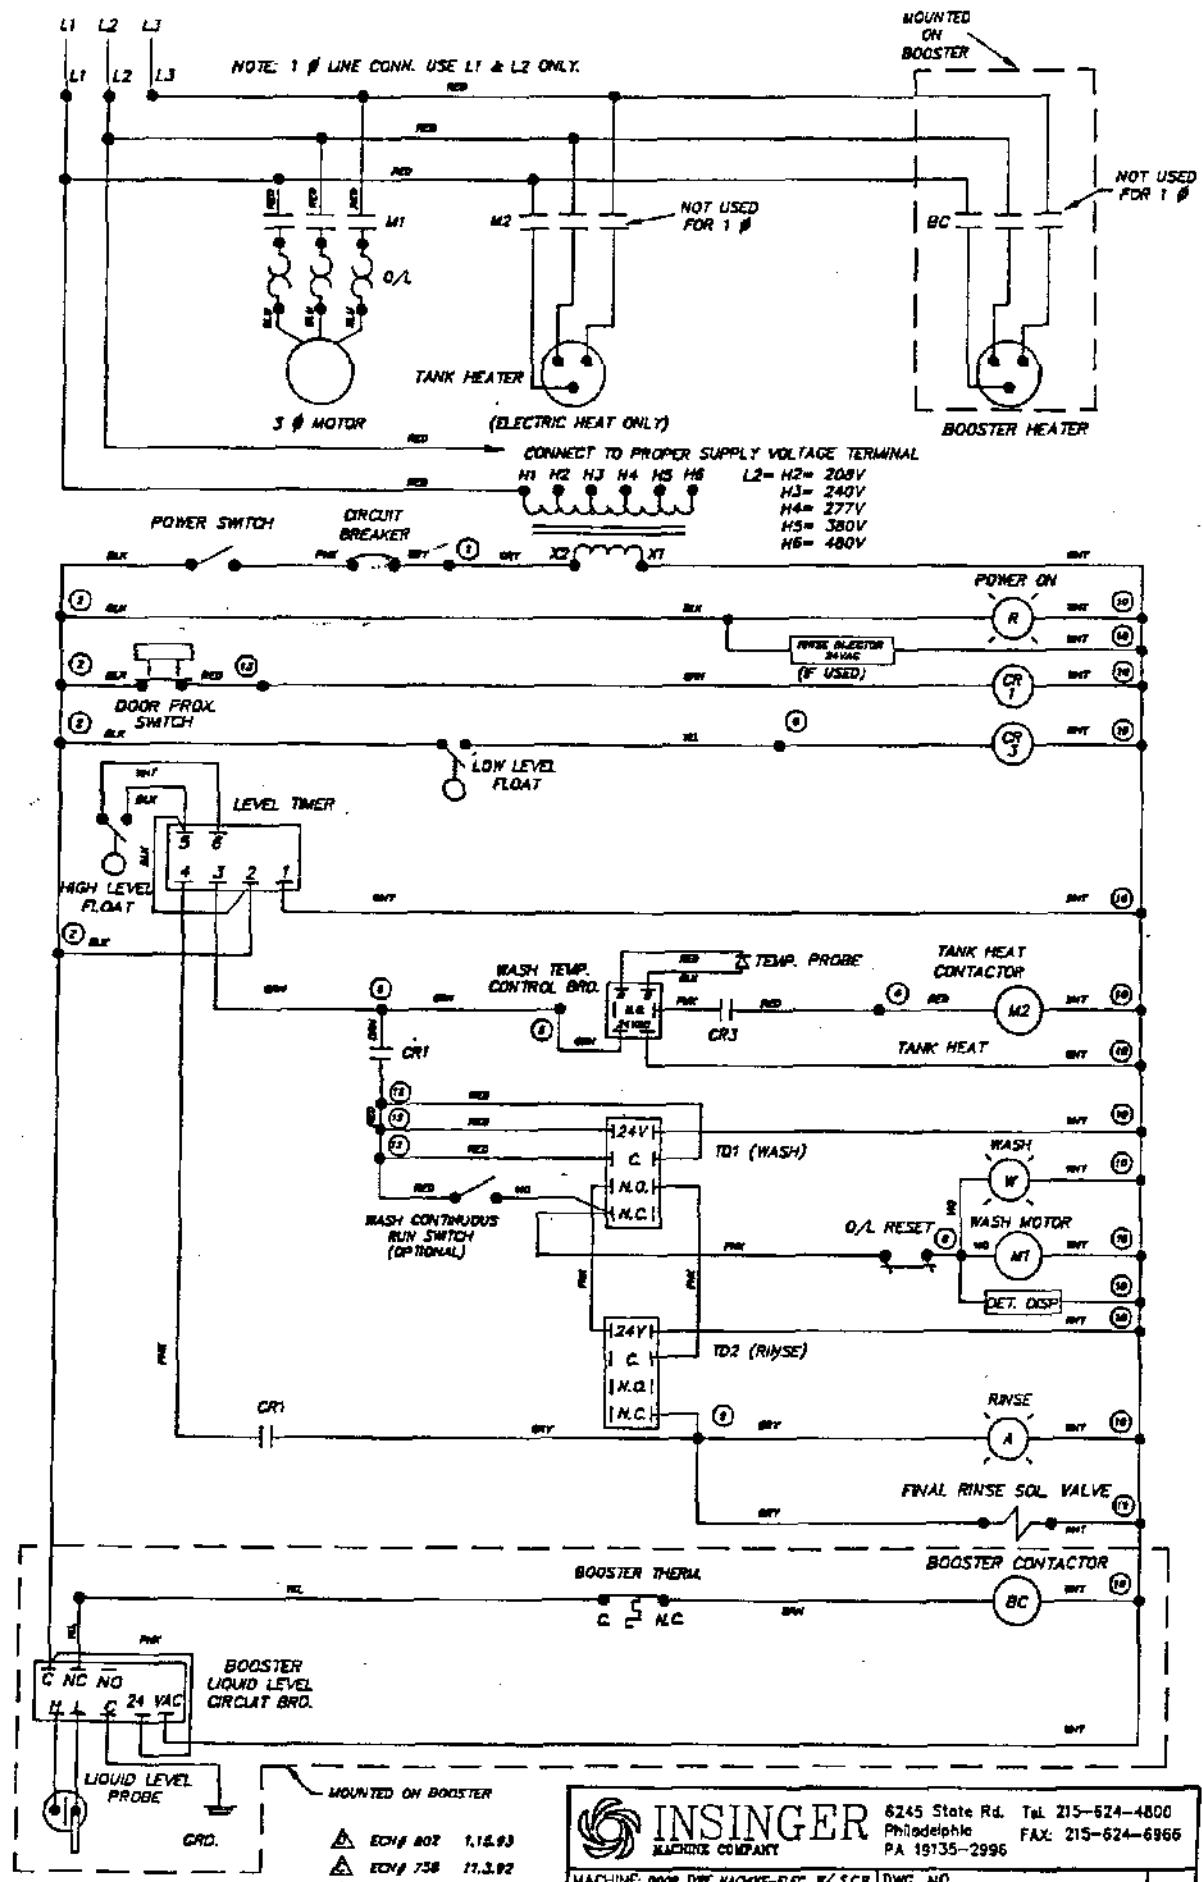

SYMPTOM	POSSIBLE CAUSE	Solution
6. Weak or ineffective final rinse spray	a. Lime deposits in spray nozzles b. Low water pressure c. Clogged line strainer d. Closed water supply valve	a. Clean or replace nozzles b. Adjust to 20PSI c. Remove line strainer and clean d. Open ball valve
7. Water hammer	a. Excessive water line pressure	a. Install water hammer limiting device
8. Machine vibrates or is noisy	a. Pump rotation reversed b. Pump bearings worn	a. Arrow on pump housing indicates direction, correct electrically b. Replace pump bearings
9. Final rinse will not shut off	a. Final rinse solenoid valve clogged b. Diaphragm worn c. Solenoid valve still powered-up	a. Disassemble valve and clean internal parts of scale or replace b. Replace with solenoid valve repair kit c. Check final rinse actuating circuit for proper operation

rlsd: 4/91  
 cm \wp\mn1\mn1bsg

## BASIC SERVICE GUIDE

SYMPTOM	POSSIBLE CAUSE	Solution
10. Tank not filling/tank heat coming on with no water in tank	a. Level probes dirty  b. Level control system not working	a. Clean level probe with Scotch-Brite or equivalent - two probes per tank  b. Troubleshoot level control circuit
11. Tank temperature too low/high	a. Thermostat not adjusted  b. Heat circuitry not working c. Electric heat, power turned off d. Electric heat, <u>immersion heaters</u> limed e. Steam heat, steam turned off f. Steam heat, not enough steam g. Steam heat, condensate traps clogged h. Gas heat, gas turned off i. Gas heat, pilot not lit	a. Adjust thermostat located in control panel  b. <u>Troubleshoot</u> circuitry c. Turn power on  d. De-lime machine  e. Turn steam on  f. Adjust steam pressure per machine spec's g. Clean or replace condensate traps h. Turn on gas i. Re-light pilot

INSINGER MACHINE CO.  
PHILA. PA. 19135 (215) 624-4800

In order to insure the proper operation of your INSINGER dishwasher, it is necessary that the LIQUID LEVEL FLOAT be wiped free of any residue and/or moisture at each cleaning. This should be done, preferably, after each use of the machine, or, at a minimum, once each day.

The LIQUID LEVEL FLOAT is located below the scrap screens in those tanks which contain water heating devices (coils, steam injectors, or electric immersion heaters) and pump inlet strainers. They are usually located, in rackless and rack conveyor style machines, on the inside tank wall, at approximately water level, opposite and parallel to the inspection doors. In the door, stationary rack, type machines, the LIQUID LEVEL FLOAT may be found beneath the scrap screen.

Below is a depiction of the LIQUID LEVEL FLOAT and the surfaces which must be wiped clean.
